

## probability

Probability is a trap  
what is  
most probable  
not always true

possible to a certain degree  
breath of probability  
likely reasons  
sensible causes  
not necessarily so

The hidden and hardly likely  
possible

We don't like it  
don't like probability  
we like to know  
this goes here  
that goes there  
things fit together  
just like that

Too bad

Not knowing  
is part of knowing  
knowing what you don't know  
and what you don't know for certain  
is a big deal  
probably a bigger deal  
than knowing what you do know  
because

things change

When your life  
your soft senses  
smack up hard  
against other things

other life  
understanding probability  
in your gut  
accepting  
when you want to be in control  
know what just happened  
what will happen  
and can't  
accepting you can't  
sinking into that knowledge  
feeling all that is not you  
the clink of it all  
the swoosh  
of time and electricity  
differences charges  
releases that equalize  
spins that hold together  
create  
holy other than you  
  
that is you  
  
bumped together  
improbable  
probable  
possible  
you
